## Education

University of AISSMS IOIT, B.Tech. in Artificial Intelligence & Data Science Nov 2022 – Nov 2026

- GPA: 7.3/10.0
- **Coursework:** Machine Learning, Deep Learning, Natural Language Processing, MLOps & Model Deployment, Data Structures & Algorithms

## Experience

Data Analytics Virtual Internship at Deloitte (Forage) Jun 2025

- Conducted data cleaning and exploratory analysis using Excel and Python on client-simulated datasets.
- Built interactive dashboards and summarized KPIs to derive business insights.
- Communicated data-driven recommendations aligned with client goals and business value.
- **Certificate:** View Credential

## Publications

Green Computing : Sustainable Development, Energy Efficiency, and IoT May 2025

Sarthak Dongare, *Ayush Lokre*, Ashutosh Khedkar  
10.36948/ijfmr.2025.v07i03.41796

## Personal Projects

PDFChatApp — Conversational AI for PDF Documents github

- Developed a Flask-based web application enabling users to upload multiple PDFs and interactively query document content using natural language, leveraging LangChain and OpenRouter APIs.
- Designed context-aware conversational querying using vector embeddings and similarity search to maintain conversation state and enhance user experience.
- Ensured scalable backend architecture to handle concurrent PDF uploads and user sessions with MongoDB for persistent chat history and session management.
- Integrated real-time user feedback loops for continuous improvement of chatbot responses and incorporated security best practices for document privacy.

Wildfire Image Classification using Deep Learning github

- Developed a Convolutional neural network (CNN) in TensorFlow/Keras to classify wildfire images with 96% test accuracy after 5 training epochs.
- Performed image preprocessing and augmentation using TensorFlow's image\_dataset\_from\_directory API to efficiently load and batch data.
- Designed and trained a multi-layer CNN architecture with Conv2D, MaxPooling, Dropout, and Dense layers optimized for binary classification.
- Forged a standardized data environment using KaggleHub, reducing setup time for new machine learning projects from 2 days to 2 hours and improving data governance.

## Skills & Technologies

**Languages:** Python, C++, JavaScript, SQL

**Databases:** PostgreSQL, MongoDB

**Web & Backend:** Flask, Next.js, Django, Express.js

**Cloud/DevOps:** Docker, Vercel, GitHub Actions

**ML/MLOps:** TensorFlow, PyTorch, MLflow

**Analytics:** Pandas, NumPy, Power BI, Tableau

**Tools:** VSCode
